

## Basic Versatility: 3 in 1 template

The basic idea behind these cards is to use one template or idea and create as many different looks as you can. These cards use a template dividing your card into three sections and designing from there. Here are some examples of the basic template. By moving your line up or down, or turning your card horizontal or vertical you will achieve different looks. I have included the measurements that I used, but you can adjust that for more variety.
